

Upload a file to private space, it means there is no url associated to them because only private users can access to that file, in this case we return the uuid of the file recently uploaded.

You must convert the file to UUID, commonly you can use your code lang to make this, example in node js:

```
...  
> const fs = require('fs');  
> const contents = fs.readFileSync('tra190820ch5.cer', {encoding: 'base64'});  
...
```

After that you can upload the file using upload request:

```
curl -X 'POST' \  
  'https://sandbox-api.foplatfrom.com/upload/a2df5301-4688-487c-bcde-861977186492' \  
  -H 'accept: application/json' \  
  -H 'Authorization: Bearer usZW14GCKCdpKs3abvNLEwmlcBm2dGt6' \  
  -H 'Content-Type: application/json' \  
  -d '{

}'
```

Response:

```
{
  "uuid": "eba51d24-4578-4686-8b58-2d7a3e588dca"
}
```

Note that we can provide cer and key as mime type since they are binary files and cannot be detected as an exact mime.

After that you can use the uuid to send in the field answer of the custom field.
